

Post-Doctoral Fellowship in Genetic Epidemiology

Postdoctoral Fellowships in genetic epidemiology are available in the Research Center for Human Genetics at the University of Texas Health Science Center at Houston. A suitable applicant will hold a PhD in statistics or biostatistics. Candidates with PhDs in genetics, molecular biology or other related areas who have substantial statistical and computational expertise are also encouraged to apply. Trainees will have the opportunity to gain expertise in the analysis of genome-wide association data, and to study gene-gene and gene-environment interaction.

To apply, send a CV; a brief statement of research interests and goals; and the contact information for 3 references (affiliations, email addresses, and phone numbers) to:

Myriam Fornage, PhD
