A postdoctoral position is available immediately at The Institute of Molecular Medicine of The University of Texas Health Science Center at Houston. The position involves studies on central mechanisms of feeding, energy homeostasis and glucose homeostasis. A recent PhD in biology or a related field is required. Highly motivated individuals with experience in animal physiology, molecular biology and neuroscience are desired. The ideal candidates should be skilled in electrophysiological recordings. Projects will be centered on understanding neurocircuitry in the brain controlling energy balance using existing animal models with neuron-specific gene deletion in combination with pharmacogenetics and optogenetics. Applicant review will begin immediately and continue until the position is filled.

Interested applicants should send a cover letter stating their research interests, a curriculum vitae, contact information of 3-5 referees and relevant reprints to:

Qingchun Tong, Ph.D.
