A postdoctoral fellow position is available to study genetic associations of human complex diseases. It will use both Sanger sequencing and next generation sequencing techniques to identify disease genes. It also will examine copy number variation and epigenetic changes in the disease population. In addition to this primary project, other projects include iPS cell studies and functional genomics are available.

The applicants must have a MD and/or PhD degree in genetics and/or cell molecular biology with relatively independent experience. Application and three references are required to be email to Xiaodong.Zhou@uth.tmc.edu.
