Book Chapters:

Publications:

53. Hasan KM. Diffusion tensor eigenvalues or both mean diffusivity and fractional anisotropy are required in quantitative clinical diffusion tensor MR reports: fractional anisotropy alone is not sufficient. Radiology. 2006;239(2):611-612.

Abstracts and Presentations:

**Hasan, K.M.**: Diffusion tensor Tractography of the Human Brain Fiber tracts across the lifespan. UT Medical Research Retreat Talk, Houston Dec 5, 2008 (*Talk*)

**Hasan, K.M.**: Diffusion tensor imaging of the naturally developing and aging human brain across the lifespan. UT Biomedical Engineering Symposium Talk at UT, Houston, January 15, 2009

**Hasan, K.M.**: Diffusion Diffusion tensor imaging of the developing and aging healthy human brain Macro and microstructural tissue organization across the lifespan. Houston Society of Biomedical Engineering 2009 meeting invited, March 18-19, 2009 (*Invited Talk*)

**Kamali, A., Kramer, L.A., and Hasan, K.M.**: Feasibility of Visual Pathways Tractography Using High-Resolution Diffusion Tensor Tractography Data on 3 T. **Accepted for** The 47th Annual ASNR Meeting, in cooperation with the ASFNR, ASHNR, ASPNR, ASSR and SNIS,

33. Hasan KM and others # 2713. A Multi-Scale Whole-Brain Optimized Diffusion Tensor Imaging of Dyslexics at 3.0T ISMRM 2007, Berlin Germany

34. Boska M, Hasan KM and others #5031. Quantitative Diffusion Tensor Imaging in a murine model of Parkinson’s Disease ISMRM 2007, Berlin Germany

37. Hahn K, Hasan KM and colleagues. Can we expect reproducible and unbiased information from denoised Diffusion Tensor Imaging with low SNR. #2797

38. Hasan KM. Diffusion Tensor Imaging of the Corpus Callosum in Multiple Sclerosis and Healthy Adults. University of Texas Houston, U of T, Research Retreat, the Houstonian March 04, 2005 (talk).

43. Hasan KM, Rodenacker K and Hahn KR. Evaluation of SNR Performance and Utility of High Spatial and Angular Resolution Denoised 1mm3 Isotropic DTI of Entire Human Brain at 3.0 T International Society of Magnetic Resonance in Medicine 14 th Meeting in Seattle, Washington, USA, May 6-12, 2006 (talk)

82. Hasan KM and Narayana PA. A novel Multi-faceted Icosahedral Diffusion Tensor Encoding Scheme for mapping the full Human Brain in Ten Minutes. Tenth Annual Neuroscience Poster Session. University of Texas at Houston (Dec 6, 2003)
