POSTDOCTORAL RESEARCH FELLOWSHIP IN NEUROPSYCHOLOGY

The University of Texas Health Science Center at Houston

The Brain, Behavior, and Injury Outcomes Program at the University of Texas Health Science Center at Houston invites applications for a 2-year Postdoctoral Fellowship beginning 9-1-2015.

The fellow will join a multidisciplinary team of investigators and clinicians on several federally funded research programs examining:

1. the impact of stress on neuroimaging, cognitive, psychological health, and salivary biomarkers following pediatric injury, and
2. multidimensional outcomes in pediatric and adult phase II clinical trials testing whether cellular therapies enhance outcomes after severe TBI.

The successful candidate will have a background in neuropsychological assessment, research design and statistics, and a track record of publication of peer-reviewed papers. There are also opportunities to participate in outpatient clinical assessment activities.

Applicants should have a doctorate in psychology; however, we will also consider fellows with a strong research track record in other areas such as cognitive neuroscience, neuroimaging, or rehabilitation.
