

# Avanti in Nottingham

Avanti Custom Homes is building a magnificent new home on Saint Mary's Lane in the Nottingham neighborhood. The over-4,200-square-foot home will have 4 bedrooms, a family room with soaring 2-story ceilings, a game room and media room, and high-end designer touches. This will be the second custom home built by Avanti in Nottingham in the past year and will be ready for move-in this May.

We specialize in customizing homes to fit our homeowners' lifestyles and needs by working with one of Trendmaker's proven designs, or creating a design from scratch. As a division of Trendmaker Homes, Avanti Custom Homes benefits from the experience, creativity, service and skills of Trendmaker's 40-plus years in the Houston home-building industry.

Our tenured home-building teams have learned that listening to our customers about how they live in their homes will spring forth a river of great ideas about how to make unique and beautiful homes that facilitate easy, comfortable daily living. Avanti's in-town design team has expertise in designing homes all over Houston, including Bellaire, Memorial, the Heights, the Medical Center, Tanglewood, the Museum District, Midtown and Uptown areas.

For more information about this or any of our other homes' availability, please contact Carolyn Lee at 281-675-3292, or visit [www.AvantiCustomHomes.com](http://www.AvantiCustomHomes.com).

# Cardiac research studies

The Weatherhead PET Imaging Center for Preventing and Reversing Atherosclerosis is seeking volunteers for two new and innovative cardiac research studies. All research study-related tests and consultations are at NO cost; paid parking.

The Coronary Blood Flow Study is to compare blood flow in the arteries with cardiac PET (Positron Emission Tomography) using different imaging techniques. Patients over the age of 40 will undergo 2 cardiac PET scans within 8 weeks; a complete cardiac consultation and lifestyle evaluation by a faculty cardiologist will be provided after the second scan. For more info, see [healyourheart.info](http://healyourheart.info).

The CENTURY Health Study, a 5-year research study focusing on prevention and non-invasive treatment of heart disease, compares 2 strategies for treating heart disease. Study participants will undergo 3 cardiac PET scans during the 5-year course of the study. If you have been diagnosed with blockages in your heart (have had a heart attack, bypass surgery, a heart balloon procedure, or stents to your heart) OR have at least 3 risk factors for heart disease, you may be eligible to participate.

For more info, visit [CENTURYHealthStudy.org](http://CENTURYHealthStudy.org). For questions or to participate in either of these studies, e-mail us at [ms.century@uth.tmc.edu](mailto:ms.century@uth.tmc.edu) or call us at 713-500-5200.
